

TURBOVIEWER

TurboViewer is available on the IMSI web site for installation on the Android or other cell phones.

Download the app, and install it.

The root directory of the Android has a number of folders, one of which is:

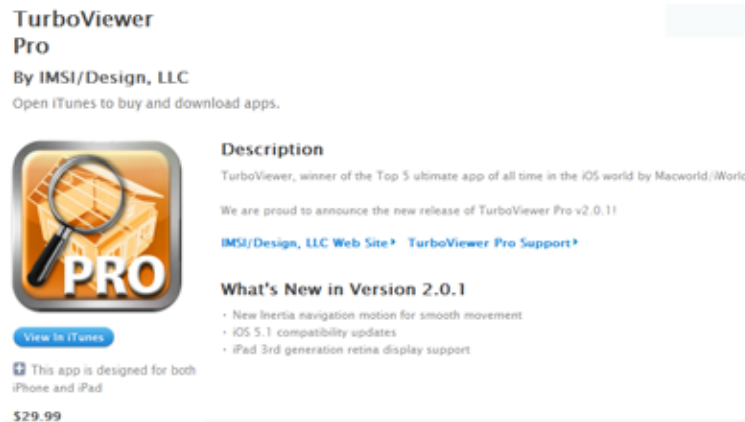

Phone\TurboViewer

and place in there DWG or DEX files.

If 2d then they are shown flat

If 3d then they are shown as 3d rotatable objects.

There are several variants, the top of the line is TurboViewer Pro:-

However, searching your application store, you may find other versions, the lowest end is free and will display the DXF and DWG files.

NOTE: DO NOT send dwg/dxf files to yourself by email and then try and open them in email BECAUSE while it will use TurboViewer, it does not seem to load email attachments when saved.
