

TABLE OF CONTENTS

introduction	introduction, a walk around the garden, and a simple horizontal dial
chapter 1	the universe the nocturnal Earth's precession
chapter 2	the solar system and how the Earth and sun interact ecliptic and the planets
chapter 3	the planet Earth and its tilted axis and the seasons three ways of telling the time using the sun why sun and clock time vary solar declination where is north north and south hemisphere differences
chapter 4	the equation of time or EOT in more depth orbital affect, and the tilted axis affect simple to complex formulae
chapter 5	methods of determining the time (altitude and azimuth dials) altitude (Capuchin, Shepherd, Astrolabe), azimuth (Analematic), and the hour angle
chapter 6	methods of determining date geometric, trigonometric, tabular method, spreadsheet, and DeltaCAD programming for drafting calendar lines
chapter 7	methods of dial plate design sun's shadow and empirical methods geometric trigonometric spreadsheet software CAD
chapter 8	the basic dials (hour angle as opposed to altitude or azimuth dials) equatorial armillary polar meridian vertical true south/north horizontal
chapter 9	the declining dials
chapter 10	the inclining or reclining dials
chapter 11	the inclining decliners, all methods and 3d CAD techniques
chapter 12	data plates for sun dials, programmable CAD, CAD animation the case of the misfit dial, the case of the disoriented dial
appendices	

NOTE: The use of CAD for drafting, techniques for programming CAD, and 3d CAD methods for plate design are extensively discussed using TurboCAD and DeltaCAD, as appropriate, in many examples.
